Paste this entire block directly: This fixes the compilation errors without changing your output logic.

#### Code Block 1 (text)

```
std::cout << Color::GRAY << "  " << Color::RESET
<< Color::CYAN << "[V-Version]  " << Color::RESET
<< Color::YELLOW << to_hex(ch.client_version) << Color::RESET << "\n"

<< Color::GRAY << "  " << Color::RESET
<< Color::CYAN << "[V-SNI]      " << Color::RESET
<< (ch.has_sni ? Color::GREEN : Color::GRAY)
<< (ch.has_sni ? ch.sni : std::string_view("<none>"))
<< Color::RESET << "\n"

<< Color::GRAY << "  " << Color::RESET
<< Color::CYAN << "[V-ALPN]    " << Color::RESET
<< (ch.first_alpn.empty() ? Color::GRAY : Color::MAGENTA)
<< (ch.first_alpn.empty() ? std::string_view("<none>") : ch.first_alpn)
<< Color::RESET << "\n"

<< Color::GRAY << "  " << Color::RESET
<< Color::CYAN << "[V-Ciphers]  " << Color::RESET
<< Color::DIM << "Count: " << Color::RESET
<< Color::BOLD << ch.cipher_suites.size() << Color::RESET << " [";
```

Yes — this is the ServerHello ALPN line. You fixed the ClientHello version, but the same issue remains here. Replace the entire ServerHello verbose block with this version: But: if your existing ServerHello block has different field names, don't blindly replace the whole thing. The error itself only requires changing this part: to: The compiler error is exactly at that concatenation.

### Code Block 1 (text)

```
std::cout << Color::GRAY << "  " << Color::RESET
<< Color::CYAN << "[V-Version]  " << Color::RESET
<< Color::YELLOW << to_hex(sh.server_version) << Color::RESET << "\n"

<< Color::GRAY << "  " << Color::RESET
<< Color::CYAN << "[V-Negotiated] " << Color::RESET
<< Color::YELLOW << to_hex(sh.negotiated_version) << Color::RESET << "\n"

<< Color::GRAY << "  " << Color::RESET
<< Color::CYAN << "[V-Cipher]   " << Color::RESET
<< Color::MAGENTA << to_hex(sh.cipher_suite) << Color::RESET << "\n"

You're right — my previous answer was wrong because I told you to paste a `ServerHello ()` block into the `ClientHello` function, where doesn't exist. Your errors now clearly show two separate issues: Lines 83–102: you accidentally pasted into the `ClientHello` function. Line 132: the actual `ServerHello` ALPN line still has the original problem. 1. First, undo the wrong block At around lines 83–102, restore your `ClientHello` block. It should use `,` not `.` The beginning should look like this: Do not put anywhere in this block. 2. Fix the actual `ServerHello` ALPN line Your line 132 is still: Replace that expression with: So the complete `ServerHello` ALPN line becomes: In short Your variables are: So: in the `ClientHello` function, and: in the `ServerHello` function. Don't replace the entire `ServerHello` function with the block I gave previously. That was my mistake. Your current compiler output confirms the accidental insertion at lines 83–102.
